

# Patient Blood Management Checkliste

Patientenaufkleber  
klein

## Präoperativ

- Bei Transfusionsrisiko >10% (Liste):
  - präoperative Anämiediagnostik (PBM-Konsil Anämie) und Anämietherapie
  - ggf. neuer OP-Termin, wenn möglich
- Stopp Plättchenaggregationshemmung ?
- Stopp Antikoagulation ?

Stationsarzt / Chirurg  
(Datum, Name, Unterschrift)

## Intraoperativ

- Restriktiver Transfusionstrigger (BÄK)
- Wärmemanagement (Normothermie)
- Gerinnungsmanagement ( $\text{pH}>7,2$ ,  $\text{Ca}^{2+}>1,2$ )
- Blut sammeln (Cellsaver)
- Point-of-Care Diagnostik (ROTEM, Multiplate) bei diffuser Blutungsneigung
- Einsatz von Tranexamsäure/ Desmopressin ?
- optimales Herzzeitvolumen ?
- Normovolämie/ Normoxie ?

Anästhesist  
(Datum, Name, Unterschrift)

## Postoperativ

- Restriktive Blutentnahmen
- Restriktiver Transfusionstrigger (BÄK)
- Wärmemanagement (Normothermie)
- Gerinnungsmanagement ( $\text{pH}>7,2$ ,  $\text{Ca}^{2+}>1,2$ )
- Blut sammeln (Cellsaver)
- Einsatz von Tranexamsäure/ Desmopressin ?
- Optimales Herzzeitvolumen ?
- Normovolämie/ Normoxie ?

PACU/ICU Arzt  
(Datum, Name, Unterschrift)

# Patient Blood Management Checklist

Patient  
sticker

**Inclusion criteria:** Age  $\geq$  18 yrs with non-ambulant surgical procedure ( $\geq$  24 hours) in narcosis

**Department:**

- General surgery       Trauma surgery       Cardiac surgery       Vascular       Urology       Otolaryngology
- Oral Maxillofacial, Plastic-Facial Surgery       Gynecology       Neurosurgery       .....

## Preoperative

- If risk of transfusion  $>10\%:$ 
  - preoperative diagnostic and / or correction of anemia  
(Consultation for anemia)
  - postponement of surgery (if possible)
- Stop dual platelets aggregation inhibitors?
- Stop anticoagulation?

## Intraoperative

- Restrictive transfusion trigger
- Normothermia
- Coagulopathy ( $pH > 7.2$ ,  $Ca^{2+} > 1,2$ )
- Blood saving techniques (salvage)
- Point-of-Care diagnostics (e.g. ROTEM, Multiplate)
- Use antifibrinolytics?
- Optimal cardiac output?
- Normovolemia/ Normoxia?

## Postoperative

- Restrictive blood samples
- Restrictive transfusion trigger
- Normothermia
- Coagulopathy ( $pH > 7.2$ ,  $Ca^{2+} > 1,2$ )
- Blood saving techniques (salvage)
- Use antifibrinolytics?
- Point-of-Care diagnostics (e.g. ROTEM, Multiplate)
- Optimal cardiac output?
- Normovolemia/ Normoxia?
